Ada - your new AI partner for AP efficiency

Manual invoice processing drains AP teams. Time spent chasing errors, facing endless data entry, and the stress of deadlines shouldn't be the norm. With AI-powered automation, these burdens disappear. AI eliminates tedious tasks and ensures seamless invoice processing. This means accurate cost allocation, on time payments and a happier, more strategic AP team.

Ready to streamline your AP processes? Say hello to efficiency, accuracy, and the freedom to focus on what truly matters. Say hello to Ada.

Meet Ada, your AI partner for enhanced efficiency

Ada works alongside your team, automating time-consuming tasks and providing valuable insights. This next-level AI within [Tradeshift Pay](#) utilizes machine learning to automate invoice and credit note coding, matching and workflows, freeing you to focus on strategic tasks. Ada even recommends your next best action, ensuring your workday flows seamlessly.

How can Ada help you?

Faster and error-free document coding — Ada is able to help code invoices and credit notes based on historical data, user input and supplier information. You can either choose assisted coding or fully automated document coding, managed entirely by Ada when all tolerances are met.

Automated document linking and matching — Finding and adding missing header or line level data is both time consuming and possibly error prone. Here is where Ada shines. By automating data enrichment, coding and order association. The results: automation rates are higher and exceptions are reduced.

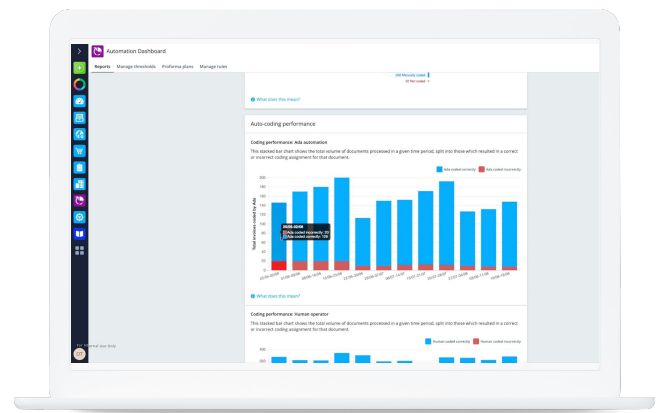

Streamlined workflow suggestions — Using historical data and context about documents you're reviewing, Ada can suggest who you should assign the document to next or who you should invite to collaborate on the document you're working on.

Product classification that supports spend analysis — Ada is able to use product and service descriptions and categorize them into UNSPSC codes. Besides supporting spend analysis, this type of categorization helps speed up direct approval flows and enriches your processes with more data.

Adjusting the level of Ada's contribution — Administrators can easily set their confidence thresholds to raise and lower how many invoices and credit notes are auto-coded by Ada and how many are processed by someone else from the team.

Performance insights with automation reports — Monitor performance under the reports section of the Automation Dashboard with visualization of accounts payable performance and coding tasks completed using Ada's automation skills versus manual processing.

Matching company profiles for a faster onboarding — Ada's automation matching skills are also used when new suppliers are onboarded. Ada will analyze the data from a supplier master data file, do an identity verification and match it against existing suppliers on the Tradeshift network to avoid profile duplication and accelerate onboarding.

Tradeshift®

Source-to-Pay

Reimagined

Universal Network

Unlike other networks and other source-to-pay solution providers, the Tradeshift platform offers value for everyone connected to it. Our experience has been that offering value is the best way to incentivize your supplier or customer to join and be part of your digital transformation. The Tradeshift network has grown quickly since 2010, with 2.5 million connections across 160+ countries - and growing.

100% Digital

Tradeshift is entirely cloud-native. We have no legacy customers in out-dated solutions and we have no legacy thinking guiding our vision for the future or product development efforts. The Tradeshift vision is built on the genuine belief that we can connect every company everywhere and with millions of users across the globe, it's happening.

One Connection

Apparently it's non-traditional for a platform like ours to provide just one connection point to the network where you can take advantage of all of our Apps and connect with all your trading partners. But we believe the shortest distance between any two objects is a straight line - so that's what we did. Every one of our customers can be a supplier and a customer, they can be in procurement, accounts payable, accounts receivable, sales, eCommerce or Treasury. One platform, one network, one connection.

Global Compliance

Tradeshift solutions work to make complex processes simpler and e-invoicing compliance rules are a great example. Companies rely on Tradeshift to manage e-invoicing compliance around the world. We've got out-of-the-box compliance for over 50 countries and a productized process for building compliance globally. We've got you covered.

Automating AP flows with Tradeshift Pay has many benefits:

- Extend or connect any system to Tradeshift-developed capabilities using our **open platform**.
- Use **modern collaboration**, embedded everywhere, to engage with employees and suppliers, facilitate the invoice processes, and resolve disputes.
- Create company- and category-specific **workflows** and on-the-fly business configurations so the solution meets your business needs.
- Say goodbye to manual data entry and error correction. **Ada automates these tasks**, freeing up your team for more strategic work.
- **Onboard your whole supply chain** quickly and effectively for all-electronic transaction efficiency.
- **Get total global compliance** in the countries you operate, including China and countries shifting to a clearance model such as Romania, Malaysia, Poland, France.
- **Ensure consistency** throughout the complete documentation lifecycle.
- Get shorter cycle times through **efficient routing** for all documents.
- Scale your business with network-based, modern solutions that are **built for change**.

About Tradeshift

Tradeshift is the cloud-based supply chain platform that transforms the way B2B buyers and suppliers connect, transact and grow. We're a leader in e-invoicing and AP automation, offering tools for compliant e-invoicing in 50+ countries, including China. We're also an innovator in B2B marketplaces and embedded fintech services that bring value, opportunity and growth to any business that joins the network. Our vision is to connect every company in the world digitally, creating economic opportunity for all.
