# Ada 2.0: Your AI-powered invoice coding agent

Automate your AP workflows with up to 100% accuracy.

Manual invoice processing drains AP teams. Time spent chasing errors, facing endless data entry, and the stress of deadlines shouldn't be the norm. An AI-powered invoice coding agent just joined the conversation. Meet Ada 2.0, powered by a new Decision Tree algorithm that delivers smarter, faster, and more accurate invoice coding with better generalization across diverse datasets and enhanced accuracy at the coding list level. AI eliminates tedious tasks and automates invoice and credit note coding, matching, and workflows.

Ready to transform AP? Say hello to Ada 2.0.

# How can Ada 2.0 help you?

## Auto-coding with up to 100% accuracy

Ada 2.0 uses Machine Learning and a powerful Decision Tree algorithm to code invoices and credit notes based on historical data, user input, and supplier information. You can choose assisted coding or fully automated document coding, managed entirely by Ada when all tolerances are met. AI automatically fills in coding fields, streamlining the process and reducing manual data entry. This capability can be enabled or disabled according to company preferences.

## Automated document linking and matching

Finding and adding missing header or line-level data is both time-consuming and error-prone. Here is where Ada shines. By automating data enrichment, coding, and order association, automation rates are higher and exceptions are reduced. Ada suggests coding according to the document completeness specification for this branch: Linked lines, Unlinked lines, and Header level charges and discounts, ensuring invoices are ready for approval and posting.

## Streamlined workflow and assignment suggestions

Using historical data and context about documents you're reviewing, Ada can suggest who you should assign the document to next or who you should invite to collaborate on the document you're working on. Ada uses context about the document you're reviewing to suggest the most appropriate person to approve or re-assign to, ensuring your workday flows seamlessly and efficiently.

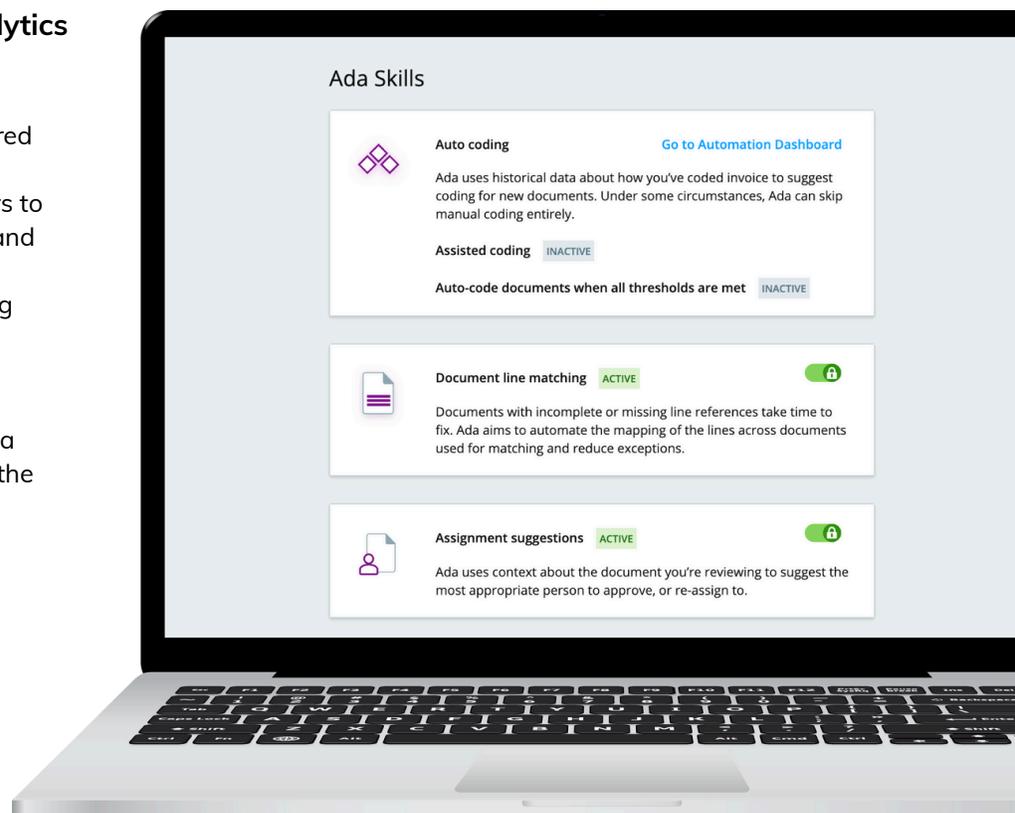

## AI Automation Dashboard with adjustable confidence thresholds

Administrators can easily set their confidence thresholds to raise and lower how many invoices and credit notes are auto-coded by Ada and how many are processed manually by the team. The Automation Dashboard measures Ada's AI performance against manual processes and provides predictive modeling to maximize efficiency and cost savings. It offers transparency and control, allowing businesses to scale AI use according to their comfort level.

## AI-powered Reporting & Analytics with company matching

Powerful dashboards and reports, including anomaly detection, powered by Amazon Quick Suite and GenAI-powered Q functionality, allow users to ask questions in natural language and get immediate visual responses. Monitor AP performance and coding tasks completed using Ada's automation versus manual processing. When onboarding suppliers, Ada matches master-data entries with companies already on the network to avoid duplication and accelerate onboarding.

# Start Small. Transform big.

One platform. One network. One connection.  
For all customers.

The Tradeshift Network connects Payables Automation, e-Invoice & Clearance, Procurement & B2B Marketplaces, Onboarding & Collaboration, and Embedded Finance all in one place.

**200**

countries  
connected.

**263**

billion USD in GMV  
over the last 12 months.

**1.4**

trillion USD in GMV  
to date.

**4**

million  
invoices monthly.

**1**

million  
onboarded suppliers.

**27**

languages  
supported globally.

## Compliant first, by default

Compliant electronic invoicing with Tradeshift is designed to support the complexities of global e-invoice issuing for large and small enterprises. Digitize your customer transactions and drive connectivity, collaboration, and compliance. The solution leverages native iPaaS capabilities present in Tradeshift middleware, with a goal to transition volume and customers to our global eInvoice network over time. The Tradeshift Network supports compliance and digital issuance to your customer base with a built-in set of compliance and collaboration tools.

## Built on AI, not bolted on

From capture to coding, matching, and automation, in Tradeshift, AI is embedded in every stage of invoice processing, enabling faster, more accurate, and context-aware automation. Beyond automation, Ada (agentic AI) is an active collaborator for AP teams, proactively identifying issues, suggesting resolutions, and executing routine tasks autonomously while keeping humans in control. AI-powered functionalities throughout the entire invoice lifecycle.

## Why AP automation fails

40% of organizations cite low adoption rates as a major challenge in AP Automation implementation. AP Automation fails when the solution is a Buyer-centric, built-in ERP, traditional "software" solution; is disconnected from your suppliers and customers; creates complex workflows rather than eliminating them; and makes data inaccessible and decision-making harder.

# How to win at AP Automation

## Why Tradeshift is different:

### Platform Advantages

- Our platform is fed by a compliant e-invoicing network
- Allows you to collaborate internally and externally
- Leverages GenAI to automate processes
- Puts data at the fingertips of decision makers

### Ada 2.0 Capabilities

- **Better generalization:** The updated algorithm generalizes better across diverse datasets
- **Enhanced accuracy:** Significant improvements in accuracy at the coding list level
- **Increased automation rate:** Higher accuracy reduces manual intervention and streamlines processes
- **User-centric improvements:** We've addressed customer pain points with enhanced features and optimizations
- **Compatibility:** The new model is backward compatible from a functionality point of view
- **Faster adaptability:** The prediction process is streamlined to a single API call for easier integration

## About Tradeshift

Tradeshift is the B2B commerce and fintech platform that redefines how buyers and suppliers connect, trade, and grow. Our network connects over a million users across 200 countries. Our cloud-based platform combines e-invoicing, AI-powered AP automation, and embedded fintech—all in one place. Transforming finance since 2010.
